

CP Ceiling Mounted Air Handling Units

CP Suspended units are based on the self-supporting construction. They are 4 sizes available with the efficiency from 200 to 3 850 m³/h intended for the air handling within the following scope: filtering, heating, cooling, humidification. There is an opportunity of using the recirculation or heat recovery on cross-flow exchanger or on glycol exchanger. They are intended mainly for building in the ceiling zone. As an option we can offer the opportunity to install on the wall, in the zone between the ceilings or use as floor standing unit. Units are available in standard, hygienic, pool or special version.
