

MV valve actuators

Valve Actuators are designed for mounting directly on valves and, respectively, for constant or on/off control, using RT controller or TP/TPP thermostat. Movement of the valve stem is proportional to the control signal from the controller or thermostat. MV Valve Actuators can also be adjusted manually and are intended for the following valves:

- DN15...40, rated force 400 N
- DN15...40, rated force 1000 N

MV valve actuator technical data

Actuator type	on/off	constant signal
Supply voltage	230V AC	24V AC
Opening/closing time	180 s	150 s
Protection level	IP43	IP40
